THE ORGANIZATION OF DELTA SIGMA PI

AT THE

PHILADELPHIA COLLEGE OF TEXTILES AND SCIENCE

CHAPTER FACULTY ADVISOR

ROBERT BOKUM

CHAPTER GUIDANCE

H. LAWRENCE LAUPHEIMER

ADVISOR TO THE INTER FRATERNITY COUNCIL

Since its organization in 1960, the Business Administration Department at the Philadelphia College of Textiles and Science has experienced rapid growth in both size and importance. As a result of this situation, there arose a need for a fraternity expressing the interests of the Business students on campus. It became apparent that Delta Sigma Pi would best satisfy these needs. Under the direction of the Director of Placement at our college, Mr. H. Lawrence Lasphelmer, the first steps toward bringing Delta Sigma Pi to our campus were taken in the Fall of

THE ORGANIZATION OF DELTA SIGMA PI

senior Michael Whitmore and junior David G. AT THE that they might look into the possibilities of PHILADELPHIA COLLEGE OF TEXTILES AND SCIENCE

Mr. Whitmore and Mr. Gingras working together took the initiative in acquiring the information concerning Delta Sigma Pi. The first meeting open to all interested students was held on December 29, 1967. From the attitude and assemblage of students attending this meeting and a number of general meetings that subsequently followed, it became apparent that now was the time for the establishment of a business fraternity at the Philadelphia College of Textiles and Science. A representative group approached Professor R. C. Bokun, who is an alumnus of Delta Sigma Pi, seeking his advice and counseling. Following the suggestions of Professor Bokun, this group chose a guiding committee to co-ordinate and direct the participating members into a cohesive functioning unit.

On January 15, 1968 we were privileged to have Mr. Ben Wolfenberger, the present Executive Secretary on the Grand Council of Delta Sigma Pi, preside at one of our meetings. At this meeting Mr. Wolfenberger explained the ideals and purposes of Delta Sigma Pi. Mr. Wolfenberger also thoroughly outlined the requirements and procedures

Since its organization in 1960, the Business Administration Department at the Philadelphia College of Textiles and Science has experienced rapid growth in both size and importance. As a result of this situation, there arose a need for a fraternity expressing the interests of the Business students on campus. It became apparent that Delta Sigma Pi would best satisfy these needs. Under the direction of the Director of Placement at our college, Mr. H. Lawrence Laupheimer, the first steps toward bringing Delta Sigma Pi to our campus were taken in the Fall of 1967. Mr. Laupheimer suggested to senior Michael Whitmore and junior David Gingras that they might look into the possibilities of organizing a local chapter.

Mr. Whitmore and Mr. Gingras working together took the initiative in acquiring the information concerning Delta Sigma Pi. The first meeting open to all interested students was held on December 29, 1967. From the attitude and assemblage of students attending this meeting and a number of general meetings that subsequently followed, it became apparent that now was the time for the establishment of a business fraternity at the Philadelphia College of Textiles and Science. A representative group approached Professor R. C. Bokum, who is an alumnus of Delta Sigma Pi, seeking his advice and counseling. Following the suggestions of Professor Bokum, this group chose a guiding committee to co-ordinate and direct the participating members into a cohesive functioning unit. On January 15, 1968 we were privileged to have Mr. Ben Wolfenberger, the present Executive Secretary on the Grand Council of Delta Sigma Pi, preside at one of our meetings. At this meeting Mr. Wolfenberger explained the ideals and purposes of Delta Sigma Pi. Mr. Wolfenberger also thoroughly outlined the requirements and procedures for joining on March 1, 1968. The policies were accepted unanimously by all

of a petitioning group. His visit further stimulated our group and the real work of establishing a chapter of Delta Sigma Pi hereby began. The first prerequisite was to obtain the approval of the college administration. The president of P.C.T.&S., Dr. Bertrand Hayward, was approached and he promptly gave his approval and support to our group.

On February 9, 1968 the question of submitting a petition was brought up in front of the group for a vote. The vote was unanimous; Philadelphia College of Textiles and Science would petition for a charter. On this day this diligent group became recognized on campus as Beta Alpha Tau.

The executive officers were elected at a general meeting held on February 12, 1968. The members voted on the following offices: President, Senior Vice-President, Vice-President, Treasurer, Secretary, Chancellor, and Historian. These positions were filled by: J. Michael Whitmore, David Gingras, John DiSepio, Albert Mandia, Edward Willis, Bruce Macauley, and Robert Reber, respectively.

The executive officers set out immediately to screen and select students for committee work. These committees were chosen to supplement the work being done by the officers, who helped co-ordinate the committees' functions. Shortly thereafter the committee chairmen were required to submit reports of their activities since the last general meeting. Having all the officers and committees chosen, on February 16, 1968 pictures of Beta Alpha Tau were taken for the 1968 Yearbook of P.C.T.&S.

Working closely together the executive officers drew up definite policies concerning membership responsibility for Beta Alpha Tau. These policies were presented to the members for criticism at a general meeting on March 1, 1968. The policies were accepted unanimously by all

those present. In order to keep better acquainted with various aspects of Delta Sigma Pi, the group's President, Mike Whitmore, kept in constant touch with a local chapter on a neighboring campus.

As a result of the efforts of both the Professional Committee and the executive officers, a number of vocational activities were organized. The first of these being a lecture by Mr. Gerald Moore, head of the Catalog Division at Sears and Roebuck Company, took place on March 8, 1968. Shortly thereafter on March 13, Mr. Morton Kalins, from the brokerage firm of W. E. Hutton, gave an excellent lecture on the price variations in the stock market. On March 28, 1968 a well-planned trip to the Dupont Company was made by members of Beta Alpha Tau. This trip was made possible through the efforts of Professor Horace Townsend, Assistant Professor of Marketing. Encouraged by the interest demonstrated by the members, the Professional Committee arranged to have both Mr. Heebner, the Vice-President Economist of the Philadelphia National Bank and Commissioner Deussing of the Federal Mediation and Conciliation Service to speak at Textile. Mr. Deussing was so well accepted by the group that the Chairman of the Professional Committee arranged to have him return in the future. Mr. Deussing suggested that it was possible to bring back with him a number of other mediators and that they might put on a mock mediation and discussion with Beta Alpha Tau members participating.

From the large turnouts at these activities it clearly indicated that the professional aspects of the fraternity were being accepted and appreciated by all in attendance.

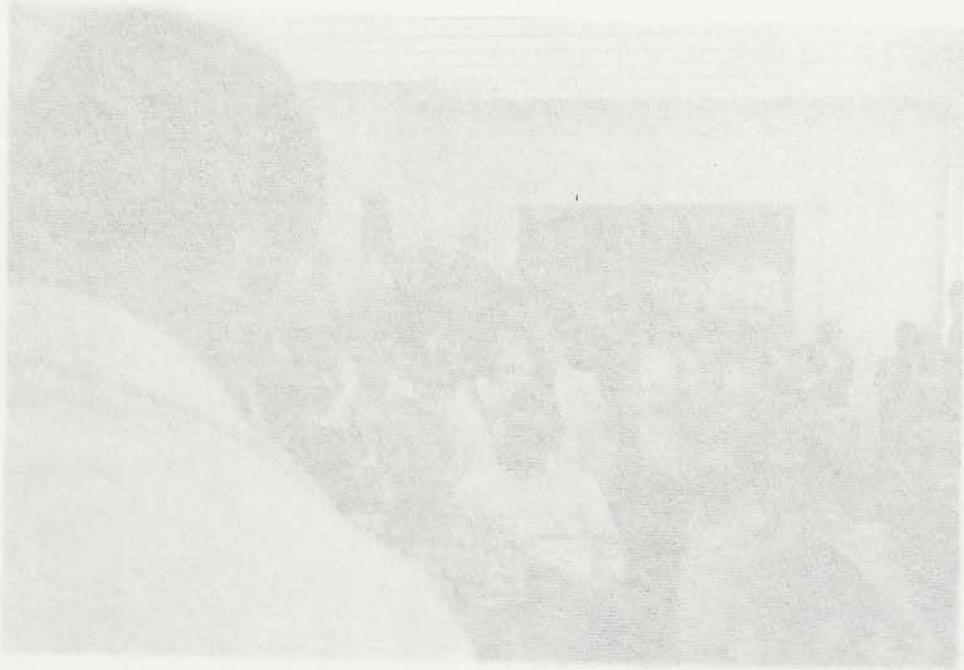

Beta Alpha Tau originated a social function on the last weekend of April 1968. The purpose of this affair was two-fold: first of

all, it was needed to acquaint the members with the brotherhood aspect of the fraternity. Secondly, this affair would help cultivate the friendships that existed among Beta Alpha Tau members.

As of the first of May 1968, the rolls of Beta Alpha Tau included 90 active members. Through their efforts the petition has and will continue to progress until the ultimate goal is achieved - a charter in Delta Sigma Pi. This goal will hopefully be reached by the Fall of 1968.

## Concluding Remarks

The Philadelphia College of Textiles and Science is located in historic Germantown, a suburban section of Philadelphia. It lies approximately six miles north west of the center of Philadelphia and extends for more than a mile along Germantown. Settled in 1683 by a group of Germans led by Francis Daniel Pastorius as part of the influx of Germans into Pennsylvania during colonial times. These people being chiefly from the Rhineland areas of Krefeld and Frankfurt rapidly developed Germantown into a prosperous settlement engaging primarily in the handicraft industries. Among the most prosperous and successful of these enterprises were the weaving, tanning, and wagon industries. It is from these German HISTORY OF GERMANTOWN community eventually took its name.

In 1690 William Rittenhouse built the first paper mill in the British Colonies on the Wissahickon Creek, which flows through Germantown. Around 1738 a man named Christopher Sauer erected a printing press in the community, which became the largest press of its kind in colonial America. Following the annexation of Germantown by the city in 1854, Philadelphia became a world-wide leader in the woolen and worsted industries. Today Germantown has surrendered its industries to Philadelphia proper and has become mainly a historical and residential suburb of the city.

One of her many historic buildings to be seen only a few blocks from the center is the Morris House, once the Capitol of the United States. Additional edifices include the Denton, which Sir William Howe used as his headquarters during the Battle of Germantown, and the Gilbert Stuart House, where the artist lived (1796-1835) and painted several portraits of George Washington.

Settled in 1683 by a group of Germans led by Francis Daniel Pastorius as part of the influx of Germans into Pennsylvania during colonial times. These people being chiefly from the Rhineland areas of Krefeld and Frankfurt rapidly developed Germantown into a prosperous settlement engaging primarily in the handicraft industries. Among the most prosperous and successful of these enterprises were the weaving, tanning, and wagon industries. It is from these German weavers that the community eventually took its name.

In 1690 William Rittenhouse built the first paper mill in the British Colonies on the Wissahickon Creek, which flows through Germantown. Around 1738 a man named Christopher Sauer erected a printing press in the community, which became the largest press of its kind in colonial America. Following the annexation of Germantown by the city in 1854, Philadelphia became a world-wide leader in the woolen and worsted industries. Today Germantown has surrendered its industries to Philadelphia proper and has become mainly a historical and residential suburb of the city.

One of the many historic buildings to be seen only a few blocks from the campus is the Morris House, once the Capitol of the United States. Additional colonial houses include Stenton, which Sir William Howe used as his headquarters during the Battle of Germantown, and the Gilbert Stuart House, where the artist lived (1796-1833) and painted several portraits of George Washington.

Germantown is also one of Pennsylvania's most historic communities with an engagement of the American Revolution being fought here on October 4, 1777 between George Washington and Sir William Howe. During the battle the Americans were quickly out-maneuvered by Howe and later General Cornwallis, who brought in additional British troops from his occupation of Philadelphia. After the battle concluded, the Americans had sustained losses of over 1000 men while the British a mere 500. George Washington and his troops immediately retired to Valley Forge a few miles to the west and prepared for winters quarters. In spite of their defeat at Germantown, the Americans by their daring had greatly impressed the French and this became a big factor for the colonies in gaining French aid during the later Revolutionary years.

*[The following text is extremely faint and largely illegible. It appears to be a continuation of the historical text, possibly describing the Battle of Germantown or the subsequent events at Valley Forge.]*

Founded in 1884, the Philadelphia College of Textiles and Science is the oldest educational institution in the United States offering instruction in textile technology.

Formal education in the technology of textile manufacture dates back to the early nineteenth century with the establishment of textile schools in France, Germany, and England. At the Centennial Exhibition held in Philadelphia in 1876, the fabrics on display from England and Europe were clearly superior to the American products in design and quality. It was evident that better trained American technicians

HISTORY OF THE PHILADELPHIA COLLEGE OF TEXTILES AND SCIENCE

and des

As a direct result of the Centennial Exhibition, a group of Philadelphia textile manufacturers led by Mr. Theodore Search, established the Philadelphia School in 1884, one of the first experiments in industrial education in the U. S. Within a few years other textile schools were founded in New England and in the South.

Situated in what at that time was a major textile center, the school prospered and grew rapidly. Starting with evening classes in 1884, a day school was opened in the following year. Early instruction was confined to fabric structure and design, however, in 1887 a department of dyeing and chemistry was added and by the turn of the century equipment had been secured for the study of yarn manufacture.

In 1894 the school, which had become a department of the Pennsylvania Museum and School of Industrial Art, moved to Broad and Pine Streets where it remained until relocating on the present campus in 1949.

...

Founded in 1884, the Philadelphia College of Textiles and Science is the oldest educational institution in the United States offering instruction in textile technology. Formal education in the technology of textile manufacture dates back to the early nineteenth century with the establishment of textile schools in France, Germany, and England. At the Centennial Exhibition held in Philadelphia in 1876, the fabrics on display from England and Europe were clearly superior to the American products in design and quality. It was evident that better trained American technicians and designers were needed if the U. S. textile industry was to keep abreast with European textile technology. As a direct result of the Centennial Exhibition, a group of Philadelphia textile manufacturers led by Mr. Theodore Search, established the Philadelphia School in 1884, one of the first experiments in industrial education in the U. S. Within a few years other textile schools were founded in New England and in the South. Situated in what at that time was a major textile center, the school prospered and grew rapidly. Starting with evening classes in 1884, a day school was opened in the following year. Early instruction was confined to fabric structure and design, however, in 1887 a department of dyeing and chemistry was added and by the turn of the century equipment had been secured for the study of yarn manufacture. In 1894 the school, which had become a department of the Pennsylvania Museum and School of Industrial Art, moved to Broad and Pine Streets where it remained until relocating on the present campus in 1949. One dollar was raised to purchase the present site of the college and build the main laboratory and classroom building. The Hamilton family provided a generous gift for the construction of the Hamilton

Much credit for this pioneering effort in the industrial education must go to Mr. Theodore Search who believed that "the highest education is no more unbecoming beneath our factory roofs than in our legislative halls, no less needed by the toilers and the builders of wealth than by those province it is to deal with the more spiritual affairs of life." Mr. Search educationally was far ahead of the thinking of his time-- the business schools and varied technical curricula offered in colleges and universities today attest to his vision.

Within a few years of its founding, three year programs were organized in textile technology, leading to a diploma in the day school and certificate programs were offered in the evening. Over the years many graduates of both the day and evening school occupied top positions of responsibility in the textile industry. The school earned an international reputation for excellence in its field attracting many students from abroad and from all parts of the U. S. Students studying here at various times have represented a total of forty-three foreign countries from six continents.

In 1941 the educational program was reorganized, extended to four years and the school was empowered by the State of Pennsylvania to grant a B. S. degree in Textile Engineering. Shortly thereafter a B. S. degree in Chemistry and Dyeing was also awarded. At this time the name of the school was changed from the Philadelphia Textile School to the Philadelphia Textile Institute.

In 1944 the Philadelphia Textile Institute Foundation was established to secure funds for a new campus for the school. More than a million dollars was raised to purchase the present site of the college and build the main laboratory and classroom building. The Hesslein family provided a generous gift for the construction of the Hesslein Library.

The present site was purchased in 1945. With the exception of the original mansion, which houses the administrative offices, all of the campus buildings have been constructed since 1949. The laboratory and classroom buildings and a library were completed then, and classes were started on the new campus in the fall of that year. Scholler Hall, housing 150 men students, was completed in 1956; and Althouse Hall, a student center, was added in 1960. A wing was added to the library in 1957 to accommodate the increasing number of volumes and to provide conference rooms and greater reading room space.

The new, larger Senator John O. Pastore Library was opened in 1967. It seats 350 students, has space for 65,000 volumes. Also opened the same year was the Michael Mutolese Apparel Research Center, the only research facility of kind in the world. It has classrooms and faculty offices in addition to an apparel research laboratory and conference center. The old library was completely renovated in 1967 and converted into a student services center with new bookstore and snack bar-lounge.

Though the great development of the college has occurred in the past decade, the college has given instruction in textiles longer than any similar institution in the U. S., it was the first and it is still the only privately owned and operated college of its type in our country.

Founded by the Philadelphia Manufacturers Association in 1884, it was originally incorporated as the Philadelphia School of the Pennsylvania Museum of Art. In 1941, the name was changed to the Philadelphia Textile Institute of the Philadelphia Museum of Art (changed from Pennsylvania Museum of Art), a degree program was approved shortly thereafter, and in 1949 the college separated from the

parent institution and became an independent non-profit corporation. Accreditation by the Middle States Association of Colleges was achieved in 1955. The school was one of the first technical colleges to receive accreditation by this association, and was reaccredited by the association in 1965. The name was changed to Philadelphia College of Textiles and Science in 1960, to indicate more accurately the full collegiate status now attained.

During the last decade several curricula changes occurred to provide wider educational opportunities. A program in Textile Management and Marketing was established in 1956, a course of study in Fabric Design was added in 1958, and the Department of Business Administration was established in 1961. Most recently the chemistry curriculum has been modified to provide for both Chemistry and Textile majors.

The evening college which had operated continuously since 1884, offering non-credit courses in Textile Technology was reorganized in 1959 to offer courses for college credits and in 1963, programs were established leading to a B. S. degree in the evening.

In addition to conducting educational programs, the college maintains a Research Department which conducts research both for the government and industry. Special educational programs are also conducted for industry both on campus and at the plant location.

Although increasing numbers (15% to 20%) of the graduates continue their education in graduate school, the larger number accept positions in industry upon graduation from college. The textile industry offers opportunities for graduates far in excess of the number available and starting salaries for graduates are most attractive.

Historically a small college, enrollments have doubled within the last six years. During the 1950's the student body was relatively stable remaining fairly constant at about 350 students. This figure has increased to about 1000 students in 1966. Recent years have seen a rapid growth in the number of young women in the student body.

Esthetically fitted to its suburban and park location, the campus is composed of ten buildings.

At the left of the driveway from School House Lane is the new and unique in all the world Michael Mutolese Apparel Research Center. One of the two newest buildings on campus, it houses a complete pilot production plant in which any kind of garment, whether it be suit, coat, dress, pants, or what have you, can be made and other apparel manufacturing machinery can be tested. Personnel can also be trained here or in the conference center also in this brick and glass building. On the second floor are classrooms and faculty offices.

Next, on the left, as we proceed down the drive, is a lovely treed plaza and beyond it the new Senator John O. Pastore Library. A magnificent and unusual concrete structure, it is named for the Rhode Island senator who is known as the "champion" of the textile industry and has visited the campus many times.

The library has seats for 350 students and space for 65,000 volumes, some 40,000 of which are kept in the separate stack building which is open to all. Another floor may be added to the stack building, when needed, increasing the library's capacity to 100,000 volumes and 400 seats. A library is the heart of any educational institute, and with 30,000 volumes, here is found one of the country's leading collections of books and periodicals in the field of textiles.

Also included is an extensive collection of fabrics samples dating back to 1788. The general collection of volumes is regularly improved. There is an adequate reference section and representative coverage in all academic areas, plus a small record collection. A feature is a card index of articles on textiles in periodicals, not otherwise listed by any commercial listing service.

Facing the library across the paved terrace, and far to our left is the main building, a landmark on the campus. The first building erected by the college in 1949, it is a sprawling and impressive brick structure of about 90,000 square feet. Here, under one roof, can be found a representative cross section of the textile industry: yarn manufacturing machinery, looms of all sizes and descriptions, knitting machines and dyeing and finishing apparatus. Here also are modern physics, chemistry, design and research laboratories, classrooms and faculty offices. The business office is also here.

On our right now, just beyond the new library and a bit further along the drive, is the old library recently renovated and converted into a modern student snack bar and informal lounge.

The gracious white mansion further down the drive and on the left again is the administration building. Called the White House, it was the original residence on the 15-acre estate. It now houses the offices of the President, Vice-President and Dean of the college, Admissions Director, Registrar, Director of Buildings and Grounds, and the Director of Institutional Advancement.

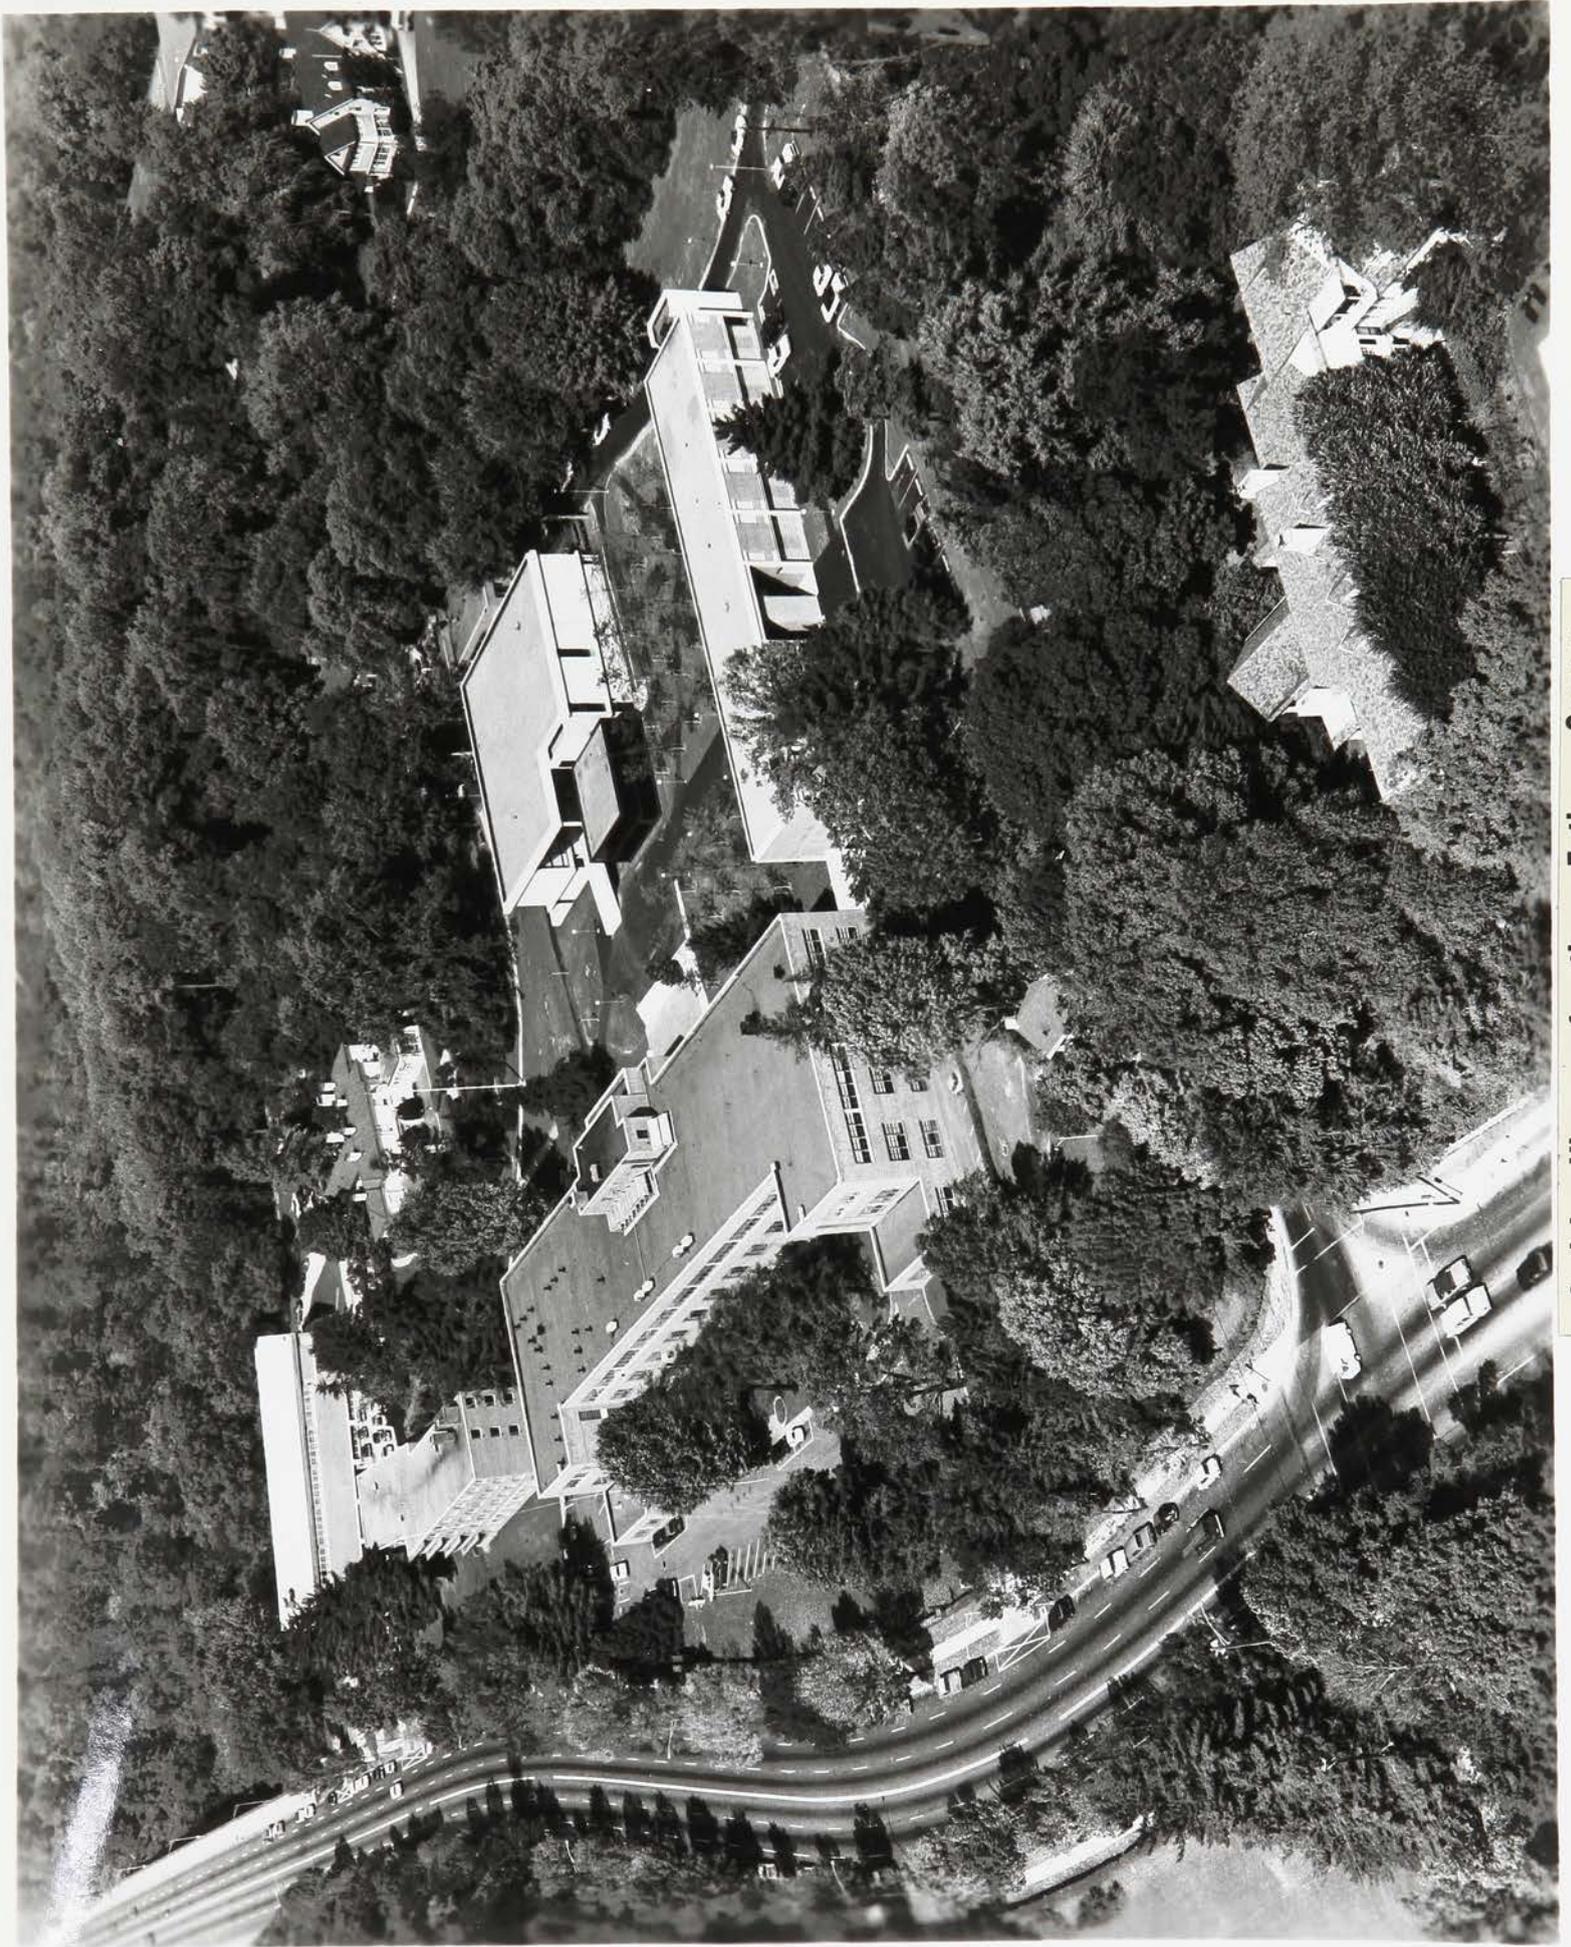

To the far left of the White House through one of several secluded, formal flower gardens on campus, is Scholler Hall, named for Frederick C. Scholler, the leading benefactor of the college. Each of the four floors contains an attractively furnished lounge, and the seventy-five

comfortable, cheerful rooms provide a desirable environment for study, relaxation and sleep. Each room has two beds, two desks, two dressers, and two closets. Carpets, mattresses, bookshelves and chairs complete the furnishings. Next along Henry Avenue from Scholler Hall, we arrive at Althouse Hall, the student center building. Named for C. Scott Althouse, an alumnus and trustee whose contribution made its construction possible, this center contains excellent facilities for dramatics, for meetings, assemblies of the student body, seminars and conferences of industrial and community groups, intercollegiate and intramural sports and physical education. The ground floor houses the modern cafeteria, a spacious student lounge, two conference rooms, and the offices of the Student Council, the "Analysis" Yearbook staff, and the student newspaper, the "Textile Collegian."

The beauty of a campus should contribute substantially to learning. The Philadelphia College of Textiles and Science is proud of its attractive, excellently maintained campus.

Aerial View of the Entire Campus

Philadelphia College of Textiles and Science offered only textile engineering and textile chemistry until 1956. In the fall of 1956, under the direction of Mr. Horace Townsend, 29 students enrolled in the program of management and marketing, while the college student body totalled 354. By 1958, the program had all four classes of textile management and marketing. In 1967, the program expanded widely with 349 students in the management and marketing program.

### HISTORY OF

The program consists of 15 textile courses, 16 liberal arts subjects, 12 business subjects, 3 general studies. The courses are divided into two categories: (1) Sales, Marketing or Merchandising or (2) Production.

### BUSINESS ADMINISTRATION

### AND

### TEXTILE MANAGEMENT AND MARKETING

### AT

In the fall of 1964, the Business Administration School was added to the college curriculum which reinforced the management and marketing program tremendously. This program also was headed by Mr. Horace Townsend. At the extent of the program, 40 students enrolled out of a total enrollment of 493 students. With the two schools combined 244 students were in the business field or 49.5% of the college enrollment.

All four classes had students in the business curriculum by the fall semester of 1964. The core of business subjects are:

- 14 General Business
- 16 Liberal Arts Subjects
- 4 Major Concentration
- 4 Free Electives

It wasn't until 1966 that a business administration student could choose between accounting, marketing or finance.

Philadelphia College of Textiles and Science offered only textile engineering and textile chemistry until 1956. In the fall of 1956, under the direction of Mr. Horace Townsend, 29 students enrolled in the program of management and marketing, while the college student body totalled 354. By 1959, the program had all four classes of textile management and marketing. In 1967, the program expanded widely with 349 students in the management and marketing program.

The program course is comprised of: 10 textile courses, 16 liberal arts subjects, 12 business subjects, 2 general studies. The course allows a student to specialize in either (1) Sales, Marketing or Merchandising or (2) Production.

In the fall of 1961, the Business Administration School was added to the college curriculum which reinforced the management and marketing program tremendously. This program also was headed by Mr. Horace Townsend. At the outset of the program, 40 students enrolled out of a total enrollment of 493 students. With the two schools combined 244 students were in the business field or 49.5% of the college enrollment.

All four classes had students in the business curriculum by the fall semester of 1964. The core of business subjects are:

- 14 General Business
- 18 Liberal Arts Subjects
- 4 Major Concentration
- 4 Free Electives

It wasn't until 1966 that a business administration student could choose between accounting, marketing or finance.

As of the fall semester 1967, 411 students were enrolled in management and marketing and 349 in business administration out of a total student body of 1050 or 71.7%

In 1968 there will be approximately a <sup>1100</sup> hundred students of which 90% will be in the management and marketing or business administration, thus, the school of business is growing tremendously under the capable guidance of Dr. Philip Elkin.

The evening college also offers business administration and management and marketing guided by Mr. Albert Weston and Mr. Donald Barden. The programs were initiated in 1961 for business and 1961 for management and marketing.

The only real difference in the near future for the programs, is that a greater number of electives will be offered to the students so that the student can benefit, by reflecting his particular interests. Also, course selection will be altered to fit today's change in business requirements.

LETTERS OF RECOMMENDATION

Mr. Don W. Wolfenbarger, Executive Secretary  
 International Fraternity of Delta Sigma Pi  
 130 South Central Avenue  
 Oxford, Ohio 45056

Dear Mr. Wolfenbarger:

We would be pleased to have our local Delta Alpha Tau become associated with Delta Sigma Pi.

The Chapter has many fine, enthusiastic and able young men in it. The programs presented and plans proposed seem to be interesting and worthwhile.

I am glad to recommend our group for membership in your National Fraternity.

Sincerely yours,

*Bertrand W. Hayward*

May 3, 1968

Mr. Benjamin Wolfenberger  
Executive Secretary  
International Fraternity of Delta Sigma Pi  
330 South Campus Avenue  
Oxford, Ohio:

Dear Mr. Wolfenberger:

Mr. J. Michael Whitmore has requested that I write you in support of a petition being made by a group of our students that their chapter be recognized by the National Fraternity of Delta Sigma Pi.

This group has acquainted me with some of their activities and provided me with a list of their membership and described their plans for the future. In my opinion, the membership is composed of students who are genuinely interested in the College and in their area of Business Administration. They have impressed me with their plans for the future.

I feel this group of young men will be a credit to any organization and we feel that recognition by Delta Sigma Pi will be beneficial to the College.

I sincerely hope that this group may obtain recognition and take its place with other organizations on the campus.

Yours very truly,

A handwritten signature in dark ink, appearing to read "Donald B. Partridge". The signature is written in a cursive style with a large initial "D".

DONALD B. PARTRIDGE

OFFICE OF THE DEAN OF STUDENTS

May 1, 1968

Mr. Ben H. Wolfenberger, Executive Secretary  
International Fraternity of Delta Sigma Pi  
330 South Campus Avenue  
Oxford, Ohio.

Dear Mr. Wolfenberger:

The students concerned have asked me to write in support of this request for official recognition as a Chapter of Delta Sigma Pi. I take great pleasure in doing so.

We have been interested for several years in establishing a professional fraternity that would serve our Business Administration students, since this is such a growing and dynamic part of our educational program. However, we have waited for the right time and the proper student impetus in order to establish a group that would be effective and vibrant. It is with a sense of pride that I can report confidence that we have reached that point.

Our group includes some very fine young men who have done a remarkable job in organizing and establishing a truly effective organization. They have developed a fine program during this first year and have both enthusiasm and solid leadership. We feel confident that you will be proud to have this group of men as members of Delta Sigma Pi, and the Philadelphia College of Textiles and Science will be equally proud to have a chapter of your fraternity on this campus.

We look forward to a long and warm association. Please feel free to contact me if I can be of any assistance now or in the future.

Sincerely,

A handwritten signature in cursive script, appearing to read 'Bruce DeBruhl'.

330 South Campus Avenue  
Oxford, Ohio

Dear Mr. Wolfenberger:

It is a pleasure indeed to convey to you my thoughts relative to a group of our students who are requesting recognition by Delta Sigma Pi. I have talked at length with several of these young men and am quite impressed with their seriousness and their sense of responsibility.

Without question a chapter of Delta Sigma Pi Fraternity would be an asset to our College and I am confident that the young men petitioning for this chapter would make a definite contribution to Delta Sigma Pi.

We would welcome you on our campus and I trust that the national organization will see fit to recognize our group of students as one of its chapters. I recommend without reservation for your consideration the membership of this organization for national recognition by Delta Sigma Pi.

Sincerely yours,

OFFICE OF THE REGISTRAR

May 8, 1968

Mr. Ben H. Wolfenberger  
International Fraternity of Delta Sigma Pi  
330 South Campus Ave.,  
Oxford, Ohio

Dear Mr. Wolfenberger:

I have been requested to write a brief statement of support for the petition drawn up by a group of our students for the establishment on this campus of a Chapter of the National Fraternity of Delta Sigma Pi.

It is with a great deal of enthusiasm that I am writing to you now.

Over the past few years, our department of Business Administration has rapidly reached a point where it occupies one of the most prominent positions in our academic establishment.

In these few years I have seen the curriculum greatly revised and the students develop a significant cognizance of the affairs of both the business and general world in which they live.

I was greatly pleased to learn of the interest of our students and of the College in the establishment of a Chapter of Delta Sigma Pi, on our campus. I believe that our students are now ready and suitable for association with a professional Business Administration Fraternity of the caliber of Delta Sigma Pi, and I have no doubt that the presence of a local chapter on our campus would be significantly worthwhile and an asset to the students associated with the Fraternity.

It is with a great deal of anxiety and anticipation that I await the decision of the International Headquarters of Delta Sigma Pi regarding the recognition of a local chapter of that Fraternity at the Philadelphia College of Textiles and Science.

I hope that you will take every favorable action in support of the petition of our local group.

Sincerely yours,

A handwritten signature in cursive script that reads "Paul H. Kerstetter".

DIRECTOR OF ADMISSIONS

May 7, 1968

Mr. Ben H. Wolfenberger, Executive Secretary  
International Fraternity of Delta Sigma Pi  
330 South Campus Avenue  
Oxford, Ohio

Dear Mr. Wolfenberger:

I am very pleased that the students at our College have seen fit to attempt to bring a chapter of Delta Sigma Pi to our campus.

Over 700 of our students are enrolled in our Business Administration and Textile Management and Marketing Programs, I feel that a fraternity such as Delta Sigma Pi could be of great assistance to a large number of our students.

As is true in any profession, today's businessman is faced with technological and social problems of increasing complexity. Our curricula can offer some tools for solving these problems, however, an organization such as your fraternity should help round out the educational experience that our students will receive.

I sincerely hope that our students will be able to meet the demands that Delta Sigma Pi will place upon them.

Sincerely,

*Mott R. Linn*

March 26, 1968

Ben H. Wolfenberger  
Executive Secretary  
International Fraternity of Delta Sigma Pi  
330 South Campus Avenue  
Oxford, Ohio 45056

Dear Brother Wolfenberger:

During the years of teaching business subjects at the Philadelphia College of Textiles and Science and observing the growth of our enrollment in the Management and B.A. programs, it was my earnest wish that student interest in a business fraternity would develop.

Early in the year the enthusiastic group of students that comprise the present leadership of Beta Alpha Tau inquired of me concerning the possibilities of a business fraternity on the campus. Naturally, I encouraged the idea wholeheartedly and recommended Delta Sigma Pi as the most outstanding national business fraternity to petition.

There are many campus organizations here at the College, a number with indifferent support, but I am astounded at the sincere interest which this sizable group is showing. To date they have not only done an excellent job in organizing but are developing a very good program of meetings, outside speakers, etc.

Without equivocation, I believe the chapter will prove to be an asset, both to the College and to Delta Sigma Pi.

Fraternally yours,

A handwritten signature in cursive script that reads "Robert C. Bokum".

Robert C. Bokum

May 1, 1968

Mr. Ben H. Wolfenberger  
Executive Secretary  
International Fraternity of Delta Sigma Pi  
330 South Campus Avenue  
Oxford, Ohio 45056

Dear Sir:

A number of our excellent students who comprise the present leadership of Beta Alpha Tau fraternity and who major in the Management and Business Administration programs at this college, are anxious to form a chapter of a business fraternity at this school.

I understand that at the suggestion of Professor Bokum, this group filed an application with your fraternity.

I have been privileged to have a number of these students in my classes and know the majority of the applicants. Based on my experience with them in the classroom and my knowledge of what they have done in extra curricula activities, I feel certain that any organization to which they give their leadership will accomplish its aims and objectives.

I take pleasure in recommending this group to you.

Sincerely yours,

A handwritten signature in cursive script that reads "J. D. Raskin".

DEPARTMENT FOR INSTITUTIONAL ADVANCEMENT

May 8, 1968

Mr. Ben H. Wolfenberger  
International Fraternity of Delta Sigma Pi  
330 South Campus Avenue  
Oxford, Ohio

Dear Mr. Wolfenberger:

It is indeed a pleasure to write you in support of the young men at the Philadelphia College of Textiles and Science who would like to establish a nationally recognized Delta Sigma Pi chapter on our campus.

As an instructor of public speaking and a member of the public relations staff at the College, I have had many contacts with the men who are working to bring your professional fraternity to our institution. They impress me as serious young men, who recognize the benefits and responsibilities of membership in Delta Sigma Pi. Furthermore, I am equally impressed by their maturity, and the commendable way they have approached the complicated business of starting a chapter.

Over one-third of our student body (which is now 1,050), is taking the business administration curriculum. With so many business students, the assets of a professional business fraternity are clearly recognized and very desirable.

In short, on behalf of the College, I whole-heartedly support the petition of Beta Alpha Tau for membership in Delta Sigma Pi. I also guarantee the serious intentions and intelligent leadership of its members.

Sincerely yours,

A handwritten signature in cursive script that reads "David Kramer". The signature is written in dark ink and has a long, sweeping underline that extends to the right.

David Kramer

University with  
loan education.  
The assured stability

THIS IS THE COLLEGE

Diversity without divisiveness should be a great strength in American education. No centralized authority, in America, dictates from the assumed supreme wisdom of its members what our schools and colleges should do from day to day. We assume that the risk of lowered standards without centralized authority is less than the risk of petrification through too great centralization of authority. Our educational standards are assured through voluntary associations dedicated to the improvement of education, such as the Middle States Association of Colleges and Secondary Schools. The Philadelphia College of Textiles and Science is accredited by and is a member of this Association.

Educational institutions were always established for understandable and measurable purposes. One of these purposes certainly was and is to assist the group, society, or state, which provides that educational opportunity, to improve and survive. It is our belief that development of the individual to the fullest possible limits of his abilities for his own benefit and the benefit of society is a fundamental reason for the existence of any school or college. Whether the aims of a college are general or specialized, it deserves respect for its success in accomplishing the objectives it sets for itself.

Just as there are different types of persons, so must there be different types of colleges and universities to meet their individual needs and desires. If young men and women are to get the greatest value from every dollar and every hour they spend on higher education, they should seek the kind of educational program best suited to their own personal abilities and talents.

To many, the liberal arts college offers a satisfactory educational program, and the schools of practical or vocational arts are adequate for countless others. In between, however, there is a vast group of young men and women who, while aware of the value of both these types of education, cannot satisfy their own purposes with either. They hesitate to invest four years in an educational program which provides little special competence, and yet they are dissatisfied with the future possibilities of simply learning a trade. They seek instead a technical education on the professional level where they can see their

(b) General education is that, as probable executives, graduates may also be good leaders and cooperative citizens in their

thinking and effort more quickly translated into definite and measurable results. This, with enough general education and college life, helps to assure their future status as well-paid executives and as socially secure, responsible citizens. It is refreshing to note that in his book Slums and Suburbs, James B. Conant wrote:

"I submit that in a heavily urbanized and industrialized free society the educational experiences of youth should fit their subsequent employment. There should be a smooth transition from full-time schooling to a full-time job, whether that transition be after grade 10 or after graduation from high school, college or university."

This has always been a basic belief governing practice at this College.

Students who select the Philadelphia College of Textiles and Science as their college have a specific purpose in mind - a career with probable eventual executive responsibilities. It is evident from the students seeking a specific competence that the objectives of our institution must not be diffuse or vague. When a student has goals similar to those of the institution he attends, the probabilities of efficient accomplishment are heightened.

The student who attends the Philadelphia College of Textiles and Science is encouraged to seek, and the College provides:

- (a) A total educational program which tends to prepare students to recognize problems, organize methods of attack upon them and to follow through to probable solutions. Thus, through the College, the student accumulates experiences which enable him to deal successfully with problems of increasing complexity.
- (b) General education so that, as probable executives, graduates may also be good leaders and cooperative citizens in their home communities.

- (c) Experience in phases of student activities extensive enough so that laboratory practice in human relationships may be provided, as well as the regularly scheduled technological laboratory practice and class room procedures.
- (d) An adequate background in science and mathematics so that students may understand and seek to improve technological processes.
- (e) Business subjects sufficient to give an introduction to problems of the modern executive and to provide the fundamentals for sound, ethical business procedures.
- (f) For students majoring in textiles the fundamental technological principles and processes, and artistic elements of design combined with an understanding of the economics of production and marketing principles as found in the textile industry.

In short, the Philadelphia College of Textiles and Science helps its students to develop a competence which provides the basis for earning a good living. We believe this is an important fundamental for learning how to live.

It is our plan to organize and present course content, class room, laboratory, and student activity experience so that our graduates are educated individuals equipped with the particular fundamentals for success in all phases of the textile, chemical, apparel and other industries. At the same time, our curricula in science and business prepare students to earn advanced degrees at leading universities.

The progress of our graduates is an excellent indication that these objectives are being achieved.

In order that you may know more about the excellence of our faculty, facilities, philosophy and general college atmosphere than this or any catalog can show, we suggest you visit our campus. This should assist you to make your decision as to the college of your choice. If you meet the entrance requirements stated elsewhere in this catalog, and select Philadelphia College of Textiles and Science, you will be joining a group of men who have contributed much to American industry, and with industry rests much of the credit and responsibility for the developments of the country. The challenge for future improvements also beckons to the industrial executives of tomorrow. Properly prepared for and correctly regarded, a career in business offers all the opportunities, excitement, community service, social progress and self-development to be found in any career.

Our library was completely renovated in 1967 and converted into a student services center with new bookstore and snack-bar lounges.

Though the great development of this College has occurred in the past decade, the College has given instructions in textiles longer than any similar institution in the United States, it was the first and it is still the only privately owned and operated college of its type in our country.

Founded by the Philadelphia Association of Textile Engineers and Scientists in 1884, it

TODAY AND YESTERDAY

The Philadelphia College of Textiles and Science is a small, dynamic college for men and women with a traditional specialty in textile education. The excellence of its programs is internationally recognized. Students studying here at various times have represented a total of forty-three different foreign countries from six continents.

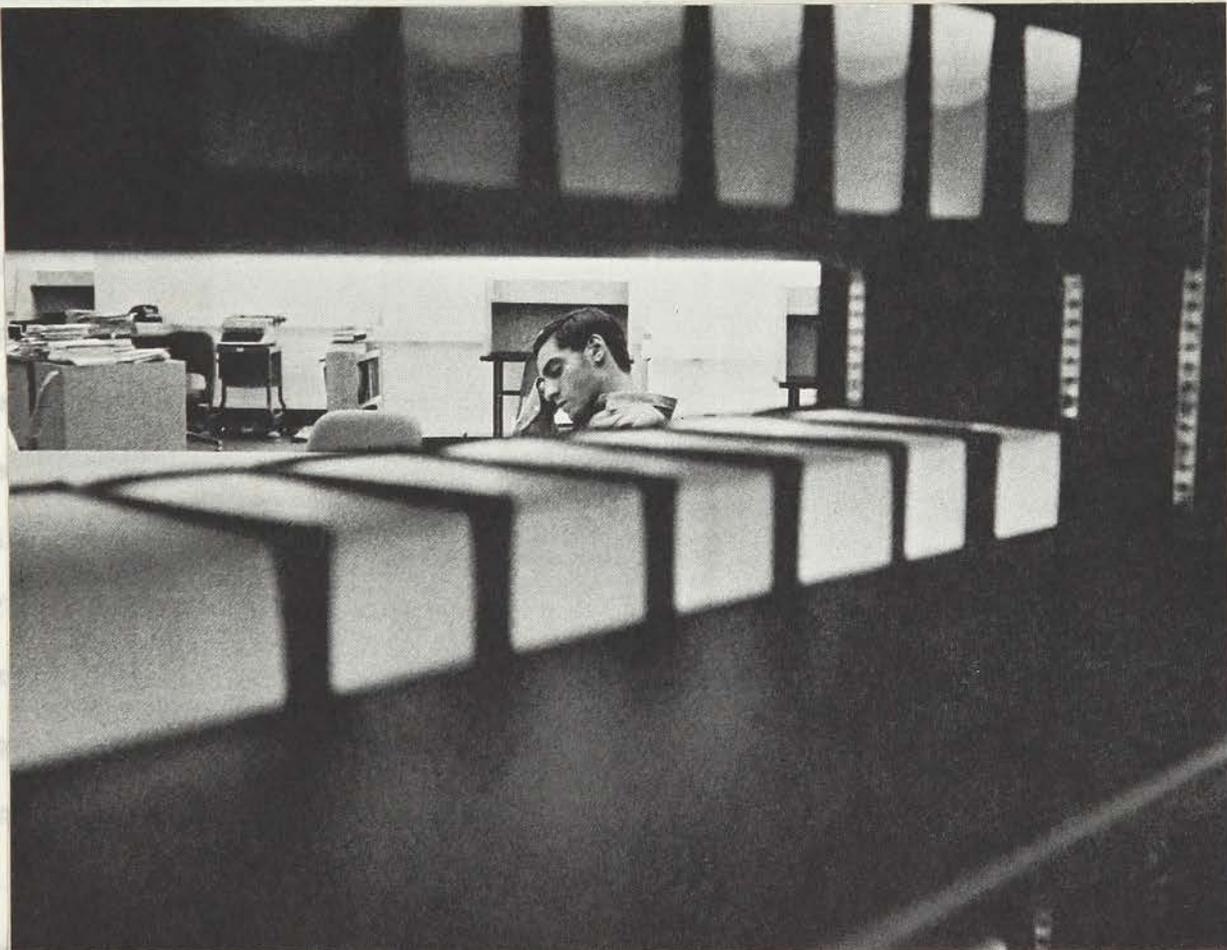

The present site was purchased in 1945. With the exception of the original mansion, which houses the administrative offices, all of the campus buildings have been constructed since 1949. The laboratory and classroom building and a library were completed then, and classes were started on the new campus in the fall of that year. Scholler Hall, housing 150 men students, was completed in 1956; and Althouse Hall, a student center, was added in 1960. A wing was added to the library in 1957 to accommodate the increasing number of volumes and to provide conference rooms and greater reading room space.

The new, larger Senator John O. Pastore Library was opened in 1967. It seats 350 students, has space for 65,000 volumes. Also opened the same year was the Michael Mutolese Apparel Research Center, the only research facility of its kind in the world. It has classrooms and faculty offices in addition to an apparel research laboratory and conference center. The old library was completely renovated in 1967 and converted into a student services center with new bookstore and snack-bar lounge.

Though the great development of this College has occurred in the past decade, the College has given instructions in textiles longer than any similar institution in the United States, it was the first and it is still the only privately owned and operated college of its type in our country.

Founded by the Philadelphia Manufacturers Association in 1884, it was originally incorporated as the Philadelphia Textile School of the Pennsylvania Museum of Art. In 1941, the name was changed to the Philadelphia Textile Institute of the Philadelphia Museum of Art (changed from Pennsylvania Museum of Art), a degree program was approved shortly thereafter, and in 1949 the college separated from the parent institution and became an independent non-profit corporation. Accreditation by the Middle States Association of Colleges was achieved in 1955. The name was changed to Philadelphia College of Textiles and Science in 1960, to indicate more accurately the full collegiate status now attained.

The College has much to offer the serious student, and the student will benefit in direct proportion to his application.

Facing the library A CAMPUS TOUR

Aesthetically fitted to its suburban and park location, the campus is composed of ten buildings.

At the left of the driveway from School House Lane is the new and unique in all the world Michael Mutolese Apparel Research Center. One of the two newest buildings on campus, it houses a complete pilot production plant in which any kind of garment, whether it be suit, coat, dress, pants, or what have you, can be made and other apparel manufacturing machinery can be tested. Personnel can also be trained here or in the conference center also in this brick and glass brick building. On the second floor are classrooms and faculty offices.

Next on the left, as we proceed down the drive, is a lovely treed plaza and beyond it the new Senator John O. Pastore Library. A magnificent and unusual concrete structure, it is named for the Rhode Island senator who is known as the "champion" of the textile industry and has visited the campus many times.

The library has seats for 350 students and space for 65,000 volumes, some 40,000 of which are kept in the separate stack building, which is open to all. Another floor may be added to the stack building, when needed, increasing the library's capacity to 100,000 volumes and 400 seats. A library is the heart of any educational institution, and with 30,000 volumes, here is found one of this country's leading collections of books and periodicals in the field of textiles. Also included is an extensive collection of fabric samples dating back to 1788. The general collection of volumes is regularly improved. There is an adequate reference section and representative coverage in all academic areas, plus a small record collection. A feature is a card index of articles on textiles in periodicals, not otherwise listed by any commercial listing service.

Facing the library across a paved terrace, and far to our left, is the main building, a landmark on the campus. The first building erected by the College in 1949, it is a sprawling and impressive brick structure of about 90,000 square feet. Here, under one roof, can be found a representative cross section of the textile industry: yarn manufacturing machinery, looms of all sizes and descriptions, knitting machines and dyeing and finishing apparatus. Here also are modern physics, chemistry, design and research laboratories, classrooms and faculty offices. The business office is also here.

On our right now, just beyond the new library and a bit further along the drive, is the old library building recently renovated and converted onto a modern student services center with attractive, spacious book store and student snack bar and informal lounge.

The gracious white mansion further down the drive and on the left again is the administration building. Called the White House, it was the original residence on this 15-acre estate. It now houses the offices of the President, Vice-President and Dean of the College, Admissions Director, Registrar, Director of Buildings and Grounds, and the Director of Institutional Advancement.

To the far left of the White House, through one of several secluded, formal flower gardens on campus, is Scholler Hall, named for Frederick C. Scholler, the leading benefactor of the College. Each of the four floors contains an attractively furnished lounge, and the seventy-five comfortable, cheerful rooms provide a desirable environment for study, relaxation and sleep. Each room has two beds, two desks, two dressers, and two closets. Carpets, mattresses, bookshelves and chairs complete the furnishings. Next along Henry Avenue from Scholler Hall, we arrive

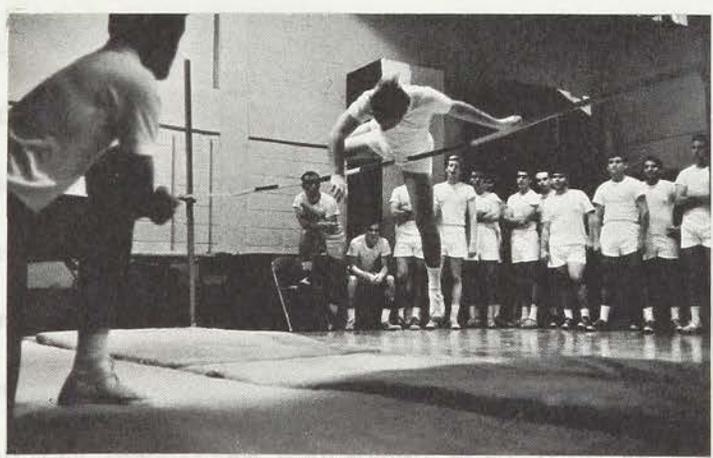

at Althouse Hall, the student center building. Named for C. Scott Althouse, an alumnus and trustee whose contribution made its construction possible, this center contains excellent facilities for dramatics, for meetings, and assemblies of the student body, seminars and conferences of industrial and community groups, intercollegiate and intramural athletics and physical education. The ground floor houses the modern cafeteria, a spacious student lounge, two conference rooms, and the offices of the Student Council, the "Analysis" year book staff and the student newspaper, "The Textile Collegian."

The beauty of a campus should contribute substantially to learning. The Philadelphia College of Textiles and Science is proud of its attractive, excellently maintained campus.

STUDENT LIFE AND ACTIVITIES

A college is more than books, class rooms and laboratories; its activities encompass more than lectures, recitations and examinations. A college is a community of people - faculty and students joined together with a common purpose: the pursuit of learning and self-improvement. The formal educational program of the College provides the core of the students' total education. Of great importance, however, are the experiences derived from informal discussions with faculty and students, the lessons learned from active participation in student affairs and the personal adjustments necessary for the student to take his place as a respected member of the college community. Education is to a large extent the result of interaction between people around ideas. Who are the people with whom you will be associated for the next four years? Your teachers are men and women selected for competence in their particular field and because of their dedication to teaching. The major aim of the faculty is to be as helpful as possible in guiding the educational and personal growth of the student.

The close association with young men from a variety of cultures, political philosophies, religions and educational backgrounds provides unusual opportunities for the exchange of ideas. In the residence hall American students from city and country live, work and play with young men from the Far East, Middle East, Europe and South America. In truth this represents a laboratory for international understanding.

The Philadelphia College of Textiles and Science is a small college currently enrolling a student body of about 1,000. Students develop close personal relationships with faculty and fellow students. Here no student need fear that he will become "lost" or a mere statistic in the office of the Registrar. The College provides an opportunity for every student to develop his interests and talents by taking an active part in one or more of the student activities.

#### STUDENT GOVERNMENT

The responsibilities for student government are centered in the Student Council. This body is responsible for the general supervision of student affairs. A major function of the Council is the control of the budget for student activities, funds for which are included in the student fees. Through the Student Council, student affairs and activities are coordinated. The Council represents the student body before the faculty and administration and provides a channel for communication between the faculty, administrators and student body. It is composed of members elected from the four classes. Student Council appoints committees to work in certain areas (e.g., the Dance Committee plans the two major social events of the year, and Student Betterment Committee is a student-faculty committee concerned with improvements for the students.)

## JUDICIAL BOARD Foundation is an organization

The Judicial Board, composed of students and faculty, exercises responsibility in cases of academic dishonesty or questionable conduct.

## HONOR SOCIETIES

The Crowfoot Society was organized in 1925 for the purpose of honoring students of superior scholastic attainment. Students are eligible who have a cumulative grade point average of 3.25 at the end of five or seven semesters.

The Senior Society recognizes students who have been outstanding in their contributions to the betterment of student life and the College through their participation in student activities. Students are selected on the basis of a point system by a committee consisting of faculty and the members of the Senior Society.

## RELIGION ON THE CAMPUS

The College welcomes young men and women of sound character and intellectual achievement without reference to race or creed. The College is non-sectarian in character, and because of the international flavor of its student body, many of the world's religions are represented on campus. Four religious groups have formal organizations. The International House cooperates in scheduling activities for students with other religious beliefs.

The Christian Science Organization holds weekly testimony meetings on campus. Part of the Organization's purpose is "to form a unified organization where Christian Scientists can regularly meet to conduct Christian Science services, hold Christian Science lectures, and to periodically conduct Christian Science activities affiliated with the College Organization."

The Hillel Foundation is an organization for Jewish students whose aim is both educational and social. Hillel's primary purpose is to educate the Jewish student in the faith, literature, history and philosophy of Judaism through discussions, guest speakers and films. Hillel seeks to integrate the Jewish student into the Jewish community by promoting fellowship between Jewish students and by intergroup activities. Hillel's social program includes dances, musical programs and dinners in order to provide for the development of new friendships with other members of the college community.

The Newman Club was organized in 1956 to foster the spiritual, intellectual and social interests of the Catholic students on campus. Under the direction of a priest, various activities of the club give emphasis to the development of a spiritually stronger person. Talks and discussions delve into the deeper aspects of Catholic thought. Discussed, too, are the interrelations of the religious and scholastic lives of the student.

Aside from its religious undertakings, the club sponsors social events which contribute to a richer life on the campus.

The Student Christian Association was organized in 1955 by the Westminster Foundation, in conjunction with the student nurses of the Woman's Medical College. The SCA is under the counselorship of a local minister and a faculty advisor.

Although primarily a Christian organization, the SCA invites all students, regardless of religious belief and practice, to join with them in their worship, meditation and social activities held at one of the colleges or in a neighboring house of worship.

#### FRATERNITIES

There are three nationally affiliated social fraternities for men on the campus - Phi Epsilon Pi, Sigma Phi Epsilon, and Tau Kappa Epsilon. There is one sorority, also nationally affiliated - Delta Zeta. The Interfraternity Council is responsible for supervision of fraternity affairs and the necessary liaison between fraternities and the College.

In addition to the social fraternities, there are two professional, honorary textile fraternities - Phi Psi and Delta Kappa Phi.

#### PUBLICATIONS

The Daemon is a new literary magazine providing an outlet for student literary achievement in order to stimulate thought on the part of the student body.

The Textile Collegian is the College newspaper which carries news, feature articles and editorials concerning the faculty, student body and campus activities. The newspaper is staffed by students who are responsible for the editing, feature writing, news writing, layout and personnel management of the enterprise.

The Analysis is the college yearbook, which is printed and distributed annually to the student body. Although it is primarily intended for the senior class, it contains a record of all college activities.

The Student Handbook, containing the rules and regulations of the college and a description of student activities and community resources, is published under the supervision of the Student Council.

The College also publishes the Textile Engineer, a magazine intended primarily for alumni but also of interest to students.

#### ORGANIZATIONS

The International Club aims to promote a better understanding between Americans and students from other lands. Through talks, films, and informal discussions, it attempts to promote a better understanding and appreciation of foreign cultures.

The American Association for Textile Technology (student chapter) through lectures, field trips and films, helps to acquaint its members with problems and organization of the textile industry and the opportunities for service which it offers.

The Varsity Club brings together all students who have represented the College in intercollegiate athletics. Symbolic of membership in this organization is a "T" pin, which not only signifies membership in the organization but also loyalty, leadership, sportsmanship, and ability on the athletic field.

The William Perkin Society coordinates the student chapters of the American Chemical Society and the American Association of Textile Chemists and Colorists. Guest speakers, films, and student reports highlight the programs.

The Photography Club provides an opportunity for interested students to exchange ideas on the art and science of photography. The class has the use of the College photography laboratory for its activities.

The Design Forum brings together those students who are particularly interested in art and design. It conducts monthly programs with outside speakers, films and discussions.

The Dramatic Club is a new group trying to organize to present plays, dramatic readings and other programs.

The Circle K Club is a service organization on campus affiliated with the Kiwanis Club of Germantown.

The American Management Association fosters the development of management skills through lecture programs and idscussion meetings.

The Music Appreciation Club meets regularly for the study and appreciation of classical music.

The Sailing Club exists for those who wish to participate in sailing and promotes informal competition with other schools.

The Ski Club plans activities for those interested in the sport of skiing.

The German Club is of interest to those students pursuing studies in German.

The Semper Fidelus Society brings together a group of students enrolled in Marine officer training programs and promotes programs such as the annual collection of toys for underprivileged children.

The Power Lifting Club brings together a group of students interested in physical development and the promotion of weight lifting as a sport.

SCOPE represents a new production club seeking to develop a keener awareness of engineering and management problems by promoting textile projects.

The Cheerleaders and a Pep Band promote spirit among the student body, particularly during the basketball season.

Various other activities are organized on the campus depending on the interests and desires of the student body.

#### INTERCOLLEGIATE AND INTRAMURAL ATHLETICS

The College recognizes the importance of organized physical activities.

As a means of physical and social development, the athletic program has

become an integral part of the educational curriculum. Skills in the

physical education course are coordinated with the intramural and intercollegiate

activities. Sports are presented in a diversity of areas that offer students the opportunity to participate in the extra-curricular activities of the college life.

The Philadelphia College of Textiles and Science maintains membership in the National Collegiate Athletic Association, the Eastern Collegiate Athletic Conference and the Middle Atlantic Conference. For those students with outstanding athletic skills, there are ten varsity sports. Basketball, baseball, soccer, swimming, tennis, golf, cross-country, sailing and weight lifting are all played on an intercollegiate level with local and nationally known schools. The College also provides an intramural program, which annually involves more than half of the student body. The activities are: touch-football, softball, basketball, volley ball, table tennis, chess and bowling. Competitive contests are organized by individuals, fraternities or clubs in conjunction with the Athletic Department.

Althouse Hall serves as the headquarters for all physical education activities. It is equipped with a gymnasium seating 1,000 people, auditorium, cafeteria, conference rooms and student lounge. The student's College identification card admits him to all athletic contests on campus.

#### COLLEGE LECTURE SERIES

The College sponsors a monthly lecture series in Althouse Hall in order to encourage student involvement and stimulate thought about important contemporary issues. This series brings to campus a wide range of distinguished personalities from business, education and government. In addition, the series is supplemented by seminars and panel discussion programs throughout the year.

FRESHMAN ORIENTATION

STUDENT SERVICES

For many students the transition from high school to college is not easy. In an effort to help incoming freshmen adjust to college life an orientation program is conducted at the beginning of the fall and spring semesters. The program is planned in cooperation with the Student Council. Group discussions are conducted regarding study habits, academic regulations, extracurricular activities, social activities and other topics. A series of tests is administered which will provide information for guidance, counseling and placement. Planned social gatherings give the freshman an opportunity to meet his classmates, instructors and faculty advisor. Each student is assigned to a faculty advisor who will assist him in planning his educational program and with any academic or personal problems which he may encounter.

SOCIAL LIFE

An active program of social events is provided under the auspices of the Student Council, the Dormitory Council, fraternities, and other organizations. Two major social highlights of the year are the Winter and Spring Weekends, sponsored by the Student Council and usually featuring nationally known entertainers.

The Dean are available for counselling to all students and parents whenever personal or academic problems arise.

The most important part of the student's college experience is, of course, his academic program. In order to reach the level of achievement desired, it is necessary to be in good physical and mental health and reasonably satisfied. The College provides a number of student services to assist the student in his daily needs as well as providing for more specific counseling and help whenever the student has difficulties.

## STUDENT SERVICES

### COUNSELING AND GUIDANCE

Frequently students come to college unprepared psychologically for the transition from high school and home to college life. A large proportion of the drop outs and failures in colleges are the result of the inability to bridge this gap successfully, rather than any lack of capacity to perform adequately at the college level. It is a prime concern of all those associated with the College that every effort be made to aid its students to make maximum use of their abilities.

All faculty members give freely of their time to advise students concerning class work, course planning and career possibilities. Freshmen and sophomore students are assigned to faculty advisors, who receive periodic reports on the students' academic progress.

Each freshman is interviewed. At this time he is counseled on the basis of the tests administered during freshman orientation. The counseling program is conducted under the supervision of a psychologist and the Dean of Students. Programs in developmental reading, study habits, and review mathematics are required for students whose test results reveal weaknesses in these areas. The College psychologist and Dean are available for counseling with students and parents whenever personal or academic problems arise.

The most important part of the student's college experience is, of course, his academic program. In order to reach the level of achievement desired, it is necessary to be in good physical and mental health and reasonably satisfied. The College provides a number of student services to assist the student in his daily needs as well as providing for more specific counseling and help whenever the student has difficulties

with his work or problems that interfere with his adjustment to the demands of college. Most of these student services are under the direction of the Dean of Students who is readily available to offer assistance or advice to any student.

#### FOREIGN STUDENT ADVISOR

A member of the faculty acts as Foreign Student Advisor. He counsels students from other countries, aids them in their adjustment to college, acts as liaison to establish contact with the community, and processes all necessary forms that have to be filed with Immigration or supplied to other government agencies.

#### ADVISOR TO WOMEN STUDENTS

A member of the College staff acts as part-time Advisor to Women Students. She is available for counsel and guidance to all women students, acts as advisor to the Delta Zeta sorority, and supervises the living arrangements for women.

#### PLACEMENT SERVICE

The demand for graduates of the Philadelphia College of Textiles and Science far exceeds the number of men and women available for employment. The Placement Office arranges for personnel representatives from many business and industrial organizations to meet with students on campus for personal interviews. Graduates are also informed of many other employment possibilities which are received by mail and telephone. A section of the library is devoted to material on careers in business and industry. The services of the Placement Office are also available to alumni of the College who may be seeking new opportunities in industry.

Their own rooms, and periodic inspections are conducted by the residence hall supervisor. Automatic coin operated laundry machines are provided for personal laundry.

STUDENT HEALTH SERVICE

The Philadelphia College of Textiles and Science maintains a health service program for its full-time students. The purposes of the program are to educate students regarding proper health practices; to prevent illness and the development and spread of contagious diseases where possible; to uncover remediable defects and to plan for their correction through advice to the student, parents and family physician; and to provide suitable medical care of students while they are away from home and at College.

The Student Health Service, located at the side entrance to the residence hall, consists of a dispensary and infirmary staffed each day by a full-time nurse. Clinic hours are held twice a week by the College physicians and they are available at any time for emergency situations. Additional facilities and services are provided through special arrangements with the nearby Hospital of the Women's Medical College of Pennsylvania.

A comprehensive student health insurance plan for medical reimbursement is available to all students on either a school year, or full-year option.

HOUSING AND FOOD SERVICE

The College currently has one residence hall on campus for men. There are seventy-five rooms in Scholler Hall, each providing quarters for two students. Rooms are completely furnished, and the student need supply only blankets, a study lamp and minor accessories. Pillows, linens and towels are provided as part of the room contract. Students clean their own rooms, and periodic inspections are conducted by the residence hall supervisor. Automatic coin operated laundry machines are provided for personal laundry.

All male students not living at home are required to live in the residence hall on campus if vacancies exist. Seniors are usually permitted to live off campus, but all other students must live on campus unless an exemption is granted by the Dean of Students for some unusual circumstance. The College is currently planning a residence hall for women students. In the meantime some, women, particularly freshmen, are housed in formitory-arranged apartments located nearby and leased by the College. Other women students are assisted in locating approved housing in homes near the College. More specific information on current housing provisions for women students can be secured from the Office of the Dean of Students.

A complete food service is provided in Althouse Hall. All students living in the residence hall take their meals in the cafeteria under a food service plan that provides three meals a day for seven days a week. An extensive selection of items is available since the cafeteria is operated by both resident students on board and commuting students on

a regular cash cafeteria basis. A student Food Service Committee meets regularly with the cafeteria Manager to plan for a better food service operation.

STUDENT SERVICES CENTER

The Student Services Center, (formerly the Hesslein Library) has been recently remodeled to provide new facilities for the student body.

One major change has been the installation of a new self-service bookstore which offers, in addition to regular textbooks and materials, a wide array of paperbacks, specialty items and personal items.

The other section of the building is a new snack bar which provides an additional food service facility and a convenient meeting place for students to relax, visit with friends and carry on informal discussions.

ACADEMIC REGULATIONS COLLEGE REGULATIONS

Some of the important college regulations are discussed below. More explicit details are given in the Student Handbook.

CONDUCT

The College has few specific regulations governing conduct. Students are expected to act as gentlemen and ladies at all times. The College assumes that students will perform their work honestly, pay their debts promptly, comply with public laws and respect the property of the College and community.

All organizations affiliated with the College or using the name of the College are expected to conduct all their affairs in a manner reflecting credit on the College. Organizations and individuals will be held responsible for these principles.

- 1. Academic Dishonesty
- 2. Possession or consumption of alcoholic beverages on campus.
- 3. Possession of firearms or weapons on campus.
- 4. Gambling or card-playing on campus.

In addition, it is necessary for the College to establish regulations governing the use of facilities and the orderly functioning of the College community in such areas as residence halls, parking, smoking, in certain academic areas, social activities, etc.

Attendance at the College is a privilege and not a right. The College reserves the right, and the student concedes to the College the right, to require the student's withdrawal at any time for any reason deemed sufficient in the maintenance of high standards of conduct and scholarship.

## ACADEMIC REGULATIONS

The school year is divided into two semesters of sixteen weeks each. Classes and laboratory periods are normally scheduled during the semester from 8:00 a.m. to 5:00 p.m., Monday through Friday. Class work includes lectures, class discussions, laboratory work, term papers, oral reports, practice problems and reading assignments. To be successful it is important that the student fully realize the necessity for daily preparation of the assigned work. The progress of the student is tested at frequent intervals.

During the semester, warning reports may be issued by faculty to students who are not performing satisfactorily. At the end of the semester, a final grade is assigned indicating the student's achievement.

There are three satisfactory grades: - A, B, and C. The grade of D is considered unsatisfactory and is the lowest passing grade. A grade of F signifies that the course work was failed and must be repeated if the student is to receive credit for the course. An I grade is given when the work cannot be completed because of illness or other emergencies.

The unit of credit is the semester hour. One credit is usually given for an hour recitation or three hours of laboratory work. A normal student schedule will carry 16 to 21 semester hours credit.

A quality point average is used to determine student standing.

#### HONORS

Those students who maintain a quality point average of 3.50 or better

A quality point average is used to determine scholastic standing. Quality points are assigned on a scale of 4 for A, 3 for B, 2 for C, 1 for D and 0 for F. A quality point score is computed by multiplying the value of the letter grade by the number of credit hours for the course. The quality point average is determined by dividing the total quality points earned by the credit hours. If, for example, the student carries nine credit hours and receives grades of A, B and C respectively in three courses worth three credits each, the quality point average would be  $27/9$ , or 3.00.

Academic grade reports are given to the student at the end of each semester by the faculty Academic Standing Committee. To maintain a good academic standing a student must earn a cumulative quality point average of 2.00. Students who fail to maintain a cumulative quality point average of 2.00 may be placed on scholastic probation. Such action will result in the loss of certain privileges. Students placed on scholastic probation will ordinarily be permitted two semesters to regain good academic standing or be separated from the College.

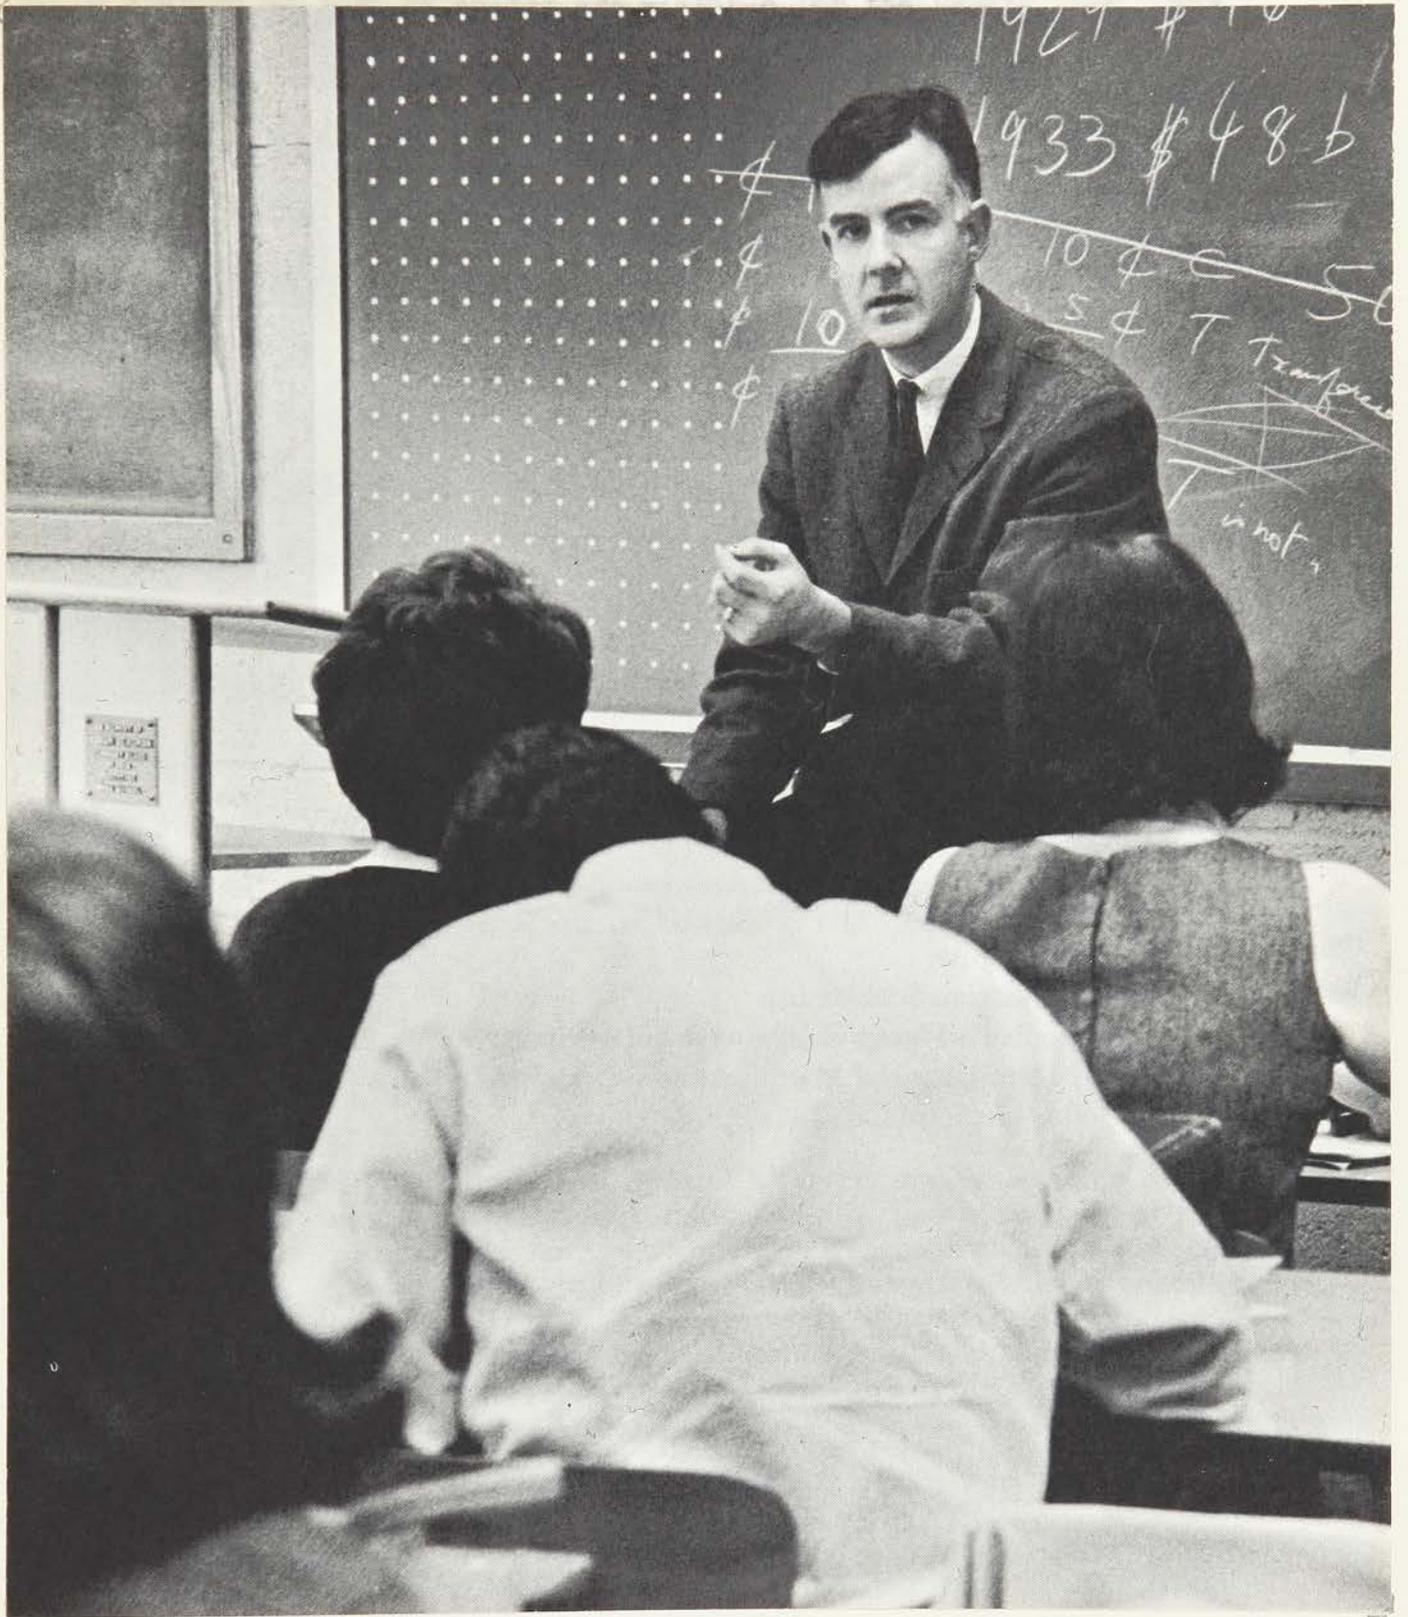

It is expected that students will attend all classes. To take care of emergencies, students in good standing are permitted a limited number of absences without penalty.

To graduate, the student must be in residence for at least four semesters, pass all required courses and have a cumulative quality point average of 2.00.

Any student who has financial obligations to the College or any recognized college organization is ineligible for graduation.

#### HONORS

Those students who maintain a quality point average of 3.50 or better

The photograph is a black and white photograph of a man in a suit standing in front of a chalkboard in a classroom. The man is looking towards the camera. The chalkboard has several mathematical equations and a diagram drawn on it. The equations include  $1929 \# 10$ ,  $1933 \# 48 b$ ,  $\$ 10$ ,  $10 \# e$ ,  $5 \# T$ , and  $50$ . There is also a diagram with the word "Temperature" written next to it and the phrase "is not" below it. The man is holding a small object in his hands. The foreground shows the backs of several students sitting at desks.

for a semester are listed on the Honor Roll. Students earning a grade point average of 3.20 or better are eligible for the Dean's List. The Alumni Chevron Award - a lapel pin - is given to all students who are listed on the Honor Roll. The pin may be worn as long as the student remains on the Honor Roll. A special pin is awarded permanently to students who have been on the Honor for three semesters.

PRIZES

A number of prizes are awarded each year to students who are outstanding in scholastic achievement or who have made noteworthy contributions to the College during their college career. Among these are the Sara Tyler Wister prizes, fraternity prizes, the American Association of Textile Technologists Award, the American Association of Textile Chemists Award, Edward W. France Memorial Citizenship Award, Textile Veterans' Association Awards, Alumni Association Award.

Today, as one of the major contributors to the national economy, the textile industry ranks among the top five in volume of production and value of products. Combined with the food industry, it would be second only to food in the national economy. A basic industry, supplying a basic human need, the textile industry will exist as long as fabrics are required for protection from heat and cold, for comfort and beauty in home furnishings, and in support of many other manufacturing processes. There are exceptional career opportunities in the textile and allied industries for both men and women.

Those interested in engineering or other advanced technical knowledge to put to work to meet the challenges involved in coordinating and directing the activities of manufacturing operations, for achieving peak production efficiency and for maintaining quality standards.

The young man or CAREERS AND COURSES or not creative ability will

The following statements give general indications of the careers possible through study in each of the curricula offered by the College. These curricula are subsequently presented in year-by-year format with individual courses briefly described. All of these curricula will prepare a student who achieves at a high level to take his place in the textile industry or to continue his education at graduate schools for advanced degrees in areas of specialization.

CAREERS IN TEXTILES

The textile industry ranks as one of the world's oldest, yet youngest industries. It is old in the sense that textiles were first produced before recorded history. It is young because textiles are undergoing a complete transformation brought on by the creation of the manufactured fibers. Starting salaries in the textile industry are above the average for Today, as one of the major industries in the United States, the textile industry ranks among the top five in number of employees and value of products. Combined with the apparel industry, it would be second only to food in the national economy. A basic industry, supplying a basic human need, the textile industry will exist as long as fabrics are required for protection from heat and cold, for comfort and beauty in home furnishings, and in support of many other manufacturing processes. There are exceptional career opportunities in the textile and allied industries for both men and women. Those interested in engineering enter an industry where technical knowledge is put to work to meet the challenges involved in coordinating and directing the activities of manufacturing departments, for achieving peak production efficiency and for maintaining quality standards.

The young man or woman with imagination and creative ability will find ample opportunity to develop interests and abilities in textile design, fabric development and fashion design. Few industries place as great a premium upon artistic expression as the textile business.

The marketing and merchandising of textile products offer one of the greatest challenges and provide unlimited opportunity to college men and women today, since the demand for textiles continues to expand. Thus the need for modern promotion and creative selling is more evident than ever before.

Finally, in textile chemistry there evolves a whole new exciting future as it is applied to fibers, colors in dyeing, the new finishes as well as in research and development - the constant search for new and better ways to do things.

Starting salaries in the textile industry are above the average for college graduates, and opportunities for advancement are excellent.

Recent surveys show that textile college graduates progress rapidly to positions of high responsibility and substantial remunerations.

The equipment, laboratories and educational program at the Philadelphia College of Textiles and Science are of internationally recognized excellence. Throughout the years since its founding in 1884, graduates have achieved top positions throughout the industry.

CAREERS IN BUSINESS ADMINISTRATION, to command new forces through know-

Today, in a period when business offers exceptional opportunities for expansion, the college graduate who has completed a business course has a wide variety of jobs available to him. Companies need many college graduates for accounting, selling, quality control, personnel and many other management positions. Men and women with ability to communicate,

to analyze ideas, to work effectively with people are needed in advertising, public relations, promotion and all fields of marketing.

The modern corporation is made up of many different departments, each with its own manager and staff. Each department specializes in a separate phase of the company's operation. A corporation gains strength through the abilities of management to apply the skills and experience of its personnel so that there is increasingly good coordination among its departments. A college education assists in providing the breadth of vision, the understanding of the scope of modern business, that makes this possible. Today's young executive must make decisions based upon a sound knowledge of economics, marketing, business organization, psychology and other subjects in a modern curriculum in business administration.

Today, business is a highly specialized profession that requires increasing numbers of young men and women who possess the best education possible. Because corporate functions are increasingly complex, industrial concerns are interested in hiring college graduates who are familiar with the principles involved in running a business.

#### CAREERS IN CHEMISTRY

There is a growing need for young men and women with a strong preparation in chemistry. Because of the chemical nature of the world around us, and man's constant effort to learn, to command new forces through knowledge, the chemist will always be in demand. Chemical knowledge is a requisite in all industries. New products, new techniques, new applications of hypotheses, theories and laws of chemistry, give careers in chemistry a lasting fascination and provide endless opportunities for personal growth and satisfaction.

The excellent faculty and laboratories and the carefully planned and developed curriculum in chemistry at this college provide the alert, conscientious student with the fundamental background which can open for him the opportunity to participate with other scientists in meeting the challenges of a dynamic future in the advance of chemical knowledge and its application to the improvement of living conditions for everyone.
